Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-8, 19-22, drawn to indexing minimum coded units, classified in class 382, subclass 232.
- II. Claim 9-12, drawn to using an index to decode perform linear operations then re-encode minimum coded units, classified in class 382, subclass 308.
- III. Claim 13, drawn to using an index to transform minimum coded units, classified in class 382, subclass 295.
- IV. Claim 14, drawn to a method of editing a minimum coded unit, classified in class 382, subclass 282.
- V. Claim 15-18, drawn to a method of mapping minimum coded units, classified in class 382, subclass 284.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as indexing minimum coded units. Subcombination II has separate utility such as decode perform linear operations then re-encode minimum coded units..

Art Unit: 2624

Subcombination III has separate utility such as using an index to transform minimum coded units. Subcombination IV has separate utility such as editing a minimum coded units. Subcombination V has separate utility such as mapping minimum coded units. See MPEP § 806.05(d).

2. The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
